

## SOLUTION SUMMARY

## OAN BUSINESS DOCS

A centralized workspace where people, process, and technology come together to manage business documents. Our enterprise cloud-native solution incorporates document storage, access control, search and retrieval, metadata, audit trail, workflows, artificial intelligence, seamless integrations to enterprise systems, along with Oracle connectors that provide a seamless experience for both the end user and content administrators.

## WHY CHOOSE OAN BUSINESS DOCS?

- 
**INTUITIVE USER SCREENS**  
 The intuitive user screens provide clear navigation, with simple layouts along with a consistent design that allows faster user adoption with little or no change management.
- 
**SECURE & CENTRALIZED**  
 Your documents are in good hands as multi-layer security is applied to keep them safe and secure in a centralized location. Our auditing feature has the ability to provide information on who and when someone changed the metadata on a given document.
- 
**SIMPLIFIED INTEGRATIONS**  
 Effortless integrates into ERP system(s) and other enterprise applications. Our pre built connectors to common Oracle® products like Fusion Apps, EBS and WebCenter take the risk out of building your own connector. We also have integrations to the most common AI cloud platforms
- 
**OVERALL LOWER COST**  
 We offer a cost-effective solution without compromising quality because we architected our solution to use the least of resources. This simplified approach lends itself to a lower cost of total ownership, so we passed our saving on to you.
- 
**VERSATILITY**  
 Our solution incorporates a “headless” architecture so you can view and manage your documents on others platform by utilizing our REST APIS.
- 
**WORKFLOWS & APPROVALS**  
 The ability to enable pre-built workflows to review & approve documents to assure accurate classification of documents and their related metadata. Any pre-built workflow and approval rules can be modified to your organization's requirements.

## 1

## PROVISION

- Oracle® Cloud Infrastructure
  - oAppsNET® Tenancy
  - Client Tenancy
- Other Cloud Providers
- On-Premises Data Center

## 2

## APPLICATION TYPE

Standalone application deployments need a replacement of their existing Content Management System.

Extending Oracle® WebCenter Content deployments have adopted the WebCenter platform, but require customer specific hand-crafted user experience layered.

Native OAN integrated deployments that subscribe to our OAN platform of products can be extended to allow for other non oAppsNET products.

## 3

## CONFIGURE

Set up your Asset Repository(s), select your Artificial Intelligence Model, apply Repository Security, apply Document Security, and select your Workflow Type. Configure your approval hierarchy.

For Standalone and Extended WebCenter deployments, you will need to configure your CX integrations and, if required, REST APIs.

# SOLUTION FEATURES

## DOCUMENT STORAGE

Our enterprise cloud native content management solution, can also be deployed on-premises, offers a centralized documents repository to manage documents for their entire lifecycle. Our document storage solution uses the latest cloud storage technologies to keep your documents safe and secure at cost effective price. We also have capabilities to integrate to other content management systems like WebCenter Content so you can choose where to store and maintain your documents.

## SEARCH AND RETRIEVAL

The search and retrieve capabilities include Keyword Search, Full Text Search, Wildcard Search, Metadata Search. Once you have a favorite search, you can save it for personal use or enable it for public consumption so others can invoke the same search. The search parameters and associated list of values can be modified to your target enterprise system(s) (i.e. EBS, Fusion Apps) to allow for a seamless user experience.

## ARTIFICIAL INTELLIGENCE

The OAN Business Docs integrates with the most common AI solutions which enables our platform call prebuilt AI models (i.e., Oracle AI - Document Understanding and Azure AI - Forms Recognition) to automate the manual step of associating metadata to a given document.

## PREBUILT INTEGRATIONS

oAppsNET's solution include prebuilt connectors for Oracle® WebCenter Content, EBS & Fusion Apps. These prebuilt connectors bypass the development phase of the project and go live faster. We also have integrations for the most common pre trained AI models offered by Oracle & Azure. We also have the capability to connect to custom trained models when pre trained models are not available. We also offer a full line of REST APIs to manage your documentation outside of our platform.

## MULTI-LAYER DOCUMENT SECURITY

Our application platform applies a multilayered security approach to protect who has access to your documents. The application security layer controls who is allowed on the platform and what role(s) they have. The administration role assigns who can manage repositories and who has access to each given repository. For each repository, users are given certain rights to view, create, update, or delete documents. In addition to user security, each repository has a REST security layer, so you have total control of your documents not matter how they are accessed.

## NATIVELY BUILT INTO THE OAN PLATFORM

The OAN Business Docs seamlessly integrates with our OAN platform of products (i.e., Accounts Payable Order Management, Vendor Management, Contracts Management, Digital Signature Solution for Adobe® and DocuSign® ) so there is no need to purchase a separate content management solution when you utilize the oAppsNET platform of products.

# ABOUT OAPPSNET

We're a US-based company specializing in the digital transformation of every facet of your organization.

**As an Oracle-certified partner with over 25 years of experience, we can ensure that your business' transition to our platform costs less, requires less time, and provides you with the efficiency that will drive your company to the next level.**
